Late payments

Impact: Medium-High

Findings:

Default rises step by step with how often applicants paid late, from about 6% for those never late to about 16% for those late on more than half of their instalments. Most applicants are punctual: 91.57% of instalments are paid on time and 47.04% of applicants were never late. Payment coverage is 101.08%, so the issue is timing, not amount. The riskiest group is small, about 9% of the book.

Recommendation:

Use late-payment frequency as an early-warning flag. Start reminders and outreach for applicants late on 25% or more of instalments, and prioritise the 6.67% averaging more than 15 days late for collections.
